

TM Forum Technical Specification

Service Catalog Management

TMFC006

Maturity Level: General availability (GA)	Team Approved Date: 26-Nov-2024
Release Status: Production	Approval Status: TM Forum Approved
Version 1.2.0	IPR Mode: RAND

Notice

Copyright © TM Forum 2024. All Rights Reserved.

This document and translations of it may be copied and furnished to others, and derivative works that comment on or otherwise explain it or assist in its implementation may be prepared, copied, published, and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and this section are included on all such copies and derivative works. However, this document itself may not be modified in any way, including by removing the copyright notice or references to TM FORUM, except as needed for the purpose of developing any document or deliverable produced by a TM FORUM Collaboration Project Team (in which case the rules applicable to copyrights, as set forth in the [TM FORUM IPR Policy](#), must be followed) or as required to translate it into languages other than English.

The limited permissions granted above are perpetual and will not be revoked by TM FORUM or its successors or assigns.

This document and the information contained herein is provided on an “AS IS” basis and TM FORUM DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

TM FORUM invites any TM FORUM Member or any other party that believes it has patent claims that would necessarily be infringed by implementations of this TM Forum Standards Final Deliverable, to notify the TM FORUM Team Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this deliverable.

The TM FORUM invites any party to contact the TM FORUM Team Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this TM FORUM Standards Final Deliverable by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this TM FORUM Standards Final Deliverable. TM FORUM may include such claims on its website but disclaims any obligation to do so.

TM FORUM takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this TM FORUM Standards Final Deliverable or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on TM FORUM's procedures with respect to rights in any document or deliverable produced by a TM FORUM Collaboration Project Team can be found on the TM FORUM website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this TM FORUM Standards Final Deliverable, can be obtained from the TM FORUM Team Administrator. TM FORUM makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.

1. Overview

Component Name	ID	Description	ODA Function Block
Service Catalog Management	TMFC006	Service Catalog Management component is responsible for organizing the collection of service specifications that identify and define all requirements of a service that can be performed. Service Catalog Management component has the functionality that enable present a customer-facing view so users are able to search and select services they need, as well as a technical view to enable define and setup what's needed to deliver service specifications (Customer Facing Service Specifications (CFSSs) and Resource Facing Service Specifications (RFSSs)) contained in the service catalog. Service Catalog Management component has functionalities that include creation of new service specifications, managing service specifications, administering the lifecycle of services, describing relationships between service specification attributes, reporting on service specification and their changes, and facilitating easy and systematic indexing and access to services, as well as facilitate automating the service delivery process.	Production

TMFC006 : Service Catalog Management

2. eTOM Processes, SID Data Entities and Functional Framework Functions

2.1. eTOM business activities

eTOM business activities this ODA Component is responsible for:

Identifier	Level	Business Activity Name	Description
1.4.13	L2	<i>Service Catalog Lifecycle Management</i>	Catalog Lifecycle Management business process covers a set of business activities that enable manage the lifecycle of an organizations catalog from design to build according to defined requirements.
1.4.14	L2	Service Catalog Operational Readiness Management	Service Catalog Operational Readiness Management business process establishes and administers the support needed to operationalize Service catalogs for ongoing day-to-day business needs.
1.4.15	L2	Service Catalog Content Management	Service Catalog Content Management business process define and provide the business activities that support the day-to-day operations of Service Catalogs in order to realize the business operations goals.
1.4.16	L2	Service Catalog Planning Management	Service Catalog Planning Management business process covers a set of business activities that understand and enable establish the plan to define, design and operationalize a catalog in order to meet the needs and objectives of Service cataloging. The Service Catalog Planning Management business process ensure that the organization is able to identify the most appropriate scheme and goal for it catalog. It includes designing the Catalog plan and developing the specification according to Service management requirement.
1.4.19	L2	Service Specification Management	Service Specification Management business process leverages captured service requirements to develop, master, analyze, and update documented standard conditions that must be satisfied by service design and/or delivery. Service Specifications Management can result in establishing, in a centralized way, technical (know-how) standards. Such standards provide the organization with a means to control and approve the values and inputs of service specification through structure, review, approval and distribution processes to stakeholders and suppliers.
1.4.3	L2	Service Specification	Service SpecificationDevelopment & Retirement processes are project oriented in that they develop and deliver new or enhanced service types. These processes

Identifier	Level	Business Activity Name	Description
		Development & Retirement	include process and procedure implementation, systems changes and customer documentation. They also undertake rollout and testing of the service type, capacity management and costing of the service type. It ensures the ability of the enterprise to deliver service types according to requirements.
1.4.3.4	L3	Develop Detailed Service Specifications	The Develop Detailed Service Specifications processes develop and document the detailed service-related technical and operational specifications, and customer manuals. These processes develop and document the required service features, the specific underpinning resource requirements and selections, the specific operational, and quality requirements and support activities, any service specific data required for the systems and network infrastructure as agreed through the Develop New Service Business Proposal processes. The Develop Detailed Product Specifications processes provide input to these specifications. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

2.2. SID ABEs

SID ABEs this ODA Component is responsible for:

SID ABE Level 1	SID ABE Level 2 (or set of BEs)*
<i>Service Specification ABE</i>	
<i>Service Performance ABE</i>	<i>Service Level Spec ABE</i>
<i>Service Performance ABE</i>	<i>Service Performance Specification ABE</i>
Service Usage ABE	ServiceUsageSpec BE
Service Configuration ABE	ServiceConfigSpec BE

*: if SID ABE Level 2 is not specified this means that all the L2 business entities must be implemented, else the L2 SID ABE Level is specified.

2.3. eTOM L2 - SID ABEs links

eTOM L2 vS SID ABEs links for this ODA Component.:

2.4. Functional Framework Functions

Please note, these Functions were changed in GB1033, but [ISA-996](#) - Master Data Management has repurposed catalog related functions : Has been raised to review this.

Functional Framework 23.5 mapping draft:

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
897	Building Access Control	Building Access Control checks, stops or allow physical access to facilities according to access roles and rules.	Identification and Permission Management	Permission Control
900	Authorization Control Management	Authorization Control Function controls permissions according to roles and related rules. It consists in evaluating if a requester is granted the permission to act by providing the required evidence. The evidence corresponds to the condition specified for each right (for instance keying the correct password to use a specific mailbox). If the action is protected via a right which is assigned (possibly via a role) to a person then the person has to be identified to retrieve their rights and verify if the request to act can be granted.	Identification and Permission Management	Permission Control

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
995	Service Task Item Policy Control Configuration	Define and configure the policies which will be implemented during the Service task item lifecycle.	Service Specification Development	Service Specification Design
1080	Service Specification Change Auditing	Service Specification Change Auditing manages the implications of Service Specifications changes to determine the consequences of any given change. Customer Facing Service Specifications (CFSSpec) changes may impact other CFSSpec according to relationships and also Product Specification that restrict it. Resources Facing Service Specification (RFSSpec) may impact other RFSSpecs according to relationships and / or CFSSpecs it realizes. The function logs Service Specifications changes and supports the analysis of relationships between Service Specifications. In addition, it tracks the history of changes in an easy and accessible manner.	Service Specification Development	Service Specification Design
1081	Service Specification Repository Management	Service Specification Repository Management is able to create, modify and delete Service Specification and related entities such as Service Usage Specification. This includes the ability to manage the state of an entity during its lifecycle (e.g. planned, deployed, in operation, replaced by, locked). It includes Service Specifications retrieval, integrity rules check and versioning management. It also provides Product Specification and Offering views adapted to the different roles.	Service Specification Development	Service Specification Design
1084	Know-How Specification Design	Know-How Specification Design provides the means to describe the Customer Facing Service Specifications including constraints, characteristics, and types of usages.	Service Specification Development	Service Specification Design

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
		It also identifies Technical Solutions usable for the Kow-How and rules to find the Technical Solution.		
1085	Technical Solution Design	Technical Solution Design provides the means to describe Resource Facing Service Specifications (a.k.a. RFSSpec) including constraints, characteristics and types of usages. It also identifies Resource Specifications used for each Technical Solution Specification (a.k.a. RFSSpec).	Service Specification Development	Service Specification Design
1086	Service Specification to Supplier Product Specification Relationship Design	Service Specification to Supplier Product Specification Relationship Design identifies, when know-how, technical solutions or part of it are not realized by the CSP, the Supplier Product Specification used to implement and corresponding rules.	Service Specification Development	Service Specification Design
1135	Technical Solution Policy Design	The Technical Solution Policy Management Function enables to define, and to check consistency of, potentially complex rules to automate the choice of the technical solution (CFS Spec) for a know-how (RFS Spec) or parts of the technical solution. Criteria can be of various nature and combined: • geographical • depending on the chosen characteristics values of the know-how • depending on other products / know-hows of the customer installed or ordered • depending on the current state of Service Platforms, Network equipment (occupation rate, load balancing, etc.) • depending on Supplier/Partner contracts (volume discounts, etc.) • etc.	Service Specification Development	Technical Solution Policy Management

3. TM Forum Open APIs & Events

The following part covers the APIs and Events; This part is split in 4:

- List of **Exposed APIs** - This is the list of APIs available from this component.
- List of **Dependent APIs** - In order to satisfy the provided API, the component could require the usage of this set of required APIs.
- List of **Events (generated & consumed)** - The events which the component may generate is listed in this section along with a list of the events which it may consume. Since there is a possibility of multiple sources and receivers for each defined event.

3.1. Exposed APIs

The following diagram illustrates API/Resource/Operation:

API ID	API Name	API Version	Mandatory / Optional	Resource	Operation
TMF633	Service Catalog Management	4	Mandatory	catalog	GET GET /ID POST PATCH DELETE
TMF633	Service Catalog Management	4	Mandatory	category	GET GET /ID POST PATCH DELETE
TMF633	Service Catalog Management	4	Mandatory	serviceSpecification	GET GET /ID POST PATCH DELETE
TMF633	Service Catalog Management	4	Mandatory	serviceCandidate	GET GET /ID POST PATCH DELETE
TMF633	Service Catalog Management	4	Mandatory	exportJob	GET GET /ID POST DELETE
TMF633	Service Catalog Management	4	Mandatory	importJob	GET GET /ID POST DELETE
TMF657	Service Quality Management	4	Optional	serviceLevelSpecification	GET GET /ID POST PATCH DELETE

API ID	API Name	API Version	Mandatory / Optional	Resource	Operation
TMF657	Service Quality Management	4	Optional	serviceLevelObjective	GET GET /ID POST PATCH DELETE
TMF657	Service Quality Management	4	Optional	serviceLevelSpecParameter	GET GET /ID POST PATCH DELETE
TMF701	Process Flow Management	4	Optional	processFlow	GET GET /ID POST DELETE
TMF701	Process Flow Management	4	Optional	taskFlow	GET GET /ID PATCH
TMF688	Event Management API	4	Optional	listener	POST
TMF688	Event Management API	4	Optional	hub	POST DELETE

3.2. Dependent APIs

Following diagram illustrates API/Resource/Operation potentially used by the service catalog component:

API ID	API Name	API Version	Mandatory / Optional	Resource	Operation	Rationale
TMF634	Resource Catalog Management	4	Optional	resourceSpecification	GET GET /ID	n/a
TMF669	Party Role Management	4	Optional	partyRole	GET GET /ID	n/a
TMF632	Party	4	Optional	individual	GET GET /ID	n/a
TMF632	Party	4	Optional	organization	GET GET /ID	n/a
TMF662	Entity Catalog Management	4	Optional	entitySpecification	GET GET /ID	n/a
TMF662	Entity Catalog Management	4	Optional	associationSpecification	GET GET /ID	n/a
TMF672	User Role Permission	4	Optional	permission	GET GET /ID	n/a
TMF688	Event Management API	4	Optional	event	GET GET /ID	n/a

3.3. Events

The diagram illustrates the Events which the component may publish and the Events that the component may subscribe to and then may receive. Both lists are derived from the APIs listed in the preceding sections.

The type of event could be:

- Create : a new resource has been created (following a POST).
- Delete: an existing resource has been deleted.
- AttributeValueChange or Change: an attribute from the resource has changed - event structure allows to pinpoint the attribute.
- InformationRequired: an attribute should be valued for the resource preventing to follow nominal lifecycle - event structure allows to pinpoint the attribute.
- StateChange: resource state has changed.

4. Machine Readable Component Specification

Refer to the ODA Component table for the machine-readable component specification file for this component.

5. References

5.1. TMF Standards related versions

Standard	Version(s)
SID	23.5
eTOM	23.5
Functional Framework	23.5

5.2. Further resources

1. IG1228: please refer to IG1228 for defined use cases with ODA components interactions.
2. TMF633 Service Catalog Management API User Guide v4.0.0

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date Modified	Modified by:	Description of changes
1.0.0	29 Mar 2022	Kamal Maghsoudlou Gaetano Biancardi Sylvie Demarest	Final edits prior to publication
1.0.1	25 Jul 2023	Ian Turkington	No content changed, simply a layout change to match template 3. Separated the YAML files to a managed repository.
1.0.1	14 Aug 2023	Amaia white	Final edits prior to publication
1.1.0	03 May 2024	Amaia White	Final edits prior to publication
1.2.0	12 Nov 2024	Gaetano Biancardi	- TMF688, removed from the core specification, moved to supporting functions - TMF672, removed from the core specification, moved to supporting functions - API version, only major version to be specified
1.2.0	26 Nov 2024	Amaia White	Final edits prior to publication

6.1.2. Release History

Release Status	Date Modified	Modified by:	Description of changes
Pre-production	29-Mar-2022	Goutham Babu	Initial release
Production	20-May-2022	Adrienne Walcott	Updated to reflect TM Forum Approved Status
Pre-production	14-Aug-2023	Amaia White	New release 1.0.1
Production	06-Oct-2023	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	02-May-2024	Hugo Vaughan	Ver 1.1.0 alignment to Frameworks 23.5 Service Test descoped to enable the definition of an additional Component
Pre-production	02-May-2024	Amaia White	New release 1.1.0

Release Status	Date Modified	Modified by:	Description of changes
Production	28-Jun-2024	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	26-Nov-2024	Amaia White	New release 1.2.0
Production	07-Mar-2025	Adrienne Walcott	Updated to reflect TM Forum Approved status

6.1.3. Acknowledgments

Team Member (@mention)	Company	Role*
Elisabeth Andersson	Matrixx	Editor
Hugo Vaughan (TM Forum)	TM Forum	Additional Input
Gaetano Biancardi	Accenture	Additional Input
Sylvie Demarest	Orange	Additional Input
Ian Turkington	TM Forum	Additional Input
