

TMFC005 (Product Inventory Management)

ODA Component Conformance Profile

Table of Contents

1. Introduction	3
2. Core Functionality	4
2.1.Compliance Requirements to Exposed API(s)	4
1. TMF637 version 4.0 API Conformance	4
2. ODA Specific TMF637 API Conformance v4.0.....	4
3. TMF637 version 5.0 API Conformance	4
4. ODA Specific TMF637 API Conformance v5.0.....	4
2.2.Dependent API Conformance.....	4
2.2.1. TMF620 Dependent API Conformance v4.x	5
2.2.2. TMF620 Dependent API Conformance v5.x	5
3. Canvas Conformance	7
3.1.Deployment Conformance	7
3.2. Configuration Conformance	8
3.3. Security Conformance	9
3.3.1. Security Exposed API Conformance.....	9
3.3.2. Security Dependent API Conformance	9
3.4. Management Conformance	10
3.4.1. Management Exposed API Conformance	10
1. Management Dependent API Conformance	10

1. Introduction

The conformance requirements outlined in this profile apply to the specified version [1beta2](#) of the [TMFC005](#) ODA Component. Any deviations from these requirements may result in non-conformance.

2. Core Functionality

2.1.Compliance Requirements to Exposed API(s)

The below table lists the mandatory Exposed API for [TMFC005](#)

The mandatory Rule in the below table must be OneOf or Allof.

Mandatory Rule	API	Version	Reference to CTK
OneOf	TMF637	4.0	https://www.tmforum.org/oda/open-apis/table
	TMF637	5.0	https://www.tmforum.org/oda/open-apis/table

1. [TMF637](#) version [4.0](#) API Conformance

The component's API must support all mandatory resources, operations, attributes, and notifications as mentioned in [TMF637B \(TMF637v4.0 Conformance Profile\)](#)

The below sections specify the additional mandatory resources, operations, attributes and notifications to be supported for ODA specific in addition to [TMF637B](#) specific API Conformance.

2. ODA Specific [TMF637](#) API Conformance [v4.0](#)

None

3. [TMF637](#) version [5.0](#) API Conformance

The component's API must support all mandatory resources, operations, attributes, and notifications as mentioned in [TMF637B \(TMF637v5.0 Conformance Profile\)](#)

The below sections specify the additional mandatory resources, operations, attributes and notifications to be supported for ODA specific in addition to [TMF637B](#) specific API Conformance.

4. ODA Specific [TMF637](#) API Conformance [v5.0](#)

None

2.2.Dependent API Conformance

The table below lists the Dependent Mandatory APIs required for [TMFC005](#).

Mandatory Rule	API	Version
OneOf	<TMF620>	4.x
	<TMF620>	5.x

2.2.1. TMF620 Dependent API Conformance v4.x

This component depends on [TMF620](#) API. The component must support the following as a client of this API:

Resource	Operation	Attributes	Rule	BDD reference
ProductOffering	GET	href , id , version	C (if ProductOffering version is specified)	< Link to BDD page for this API Resource dependency scenario >
	GET (by id)	href , id	M (No Condition)	
ProductSpecification	GET	href , id , version	M(if ProductSpecification version is specified)	< Link to BDD page for this API Resource dependency scenario >
	GET (by id)	href , id	M(No Condition)	
ProductOfferingPrice	GET	href , id , version	M(if ProductOfferingPrice version is specified)	< Link to BDD page for this API Resource dependency scenario >
	GET (by id)	href , id	M(No Condition)	

2.2.2. TMF620 Dependent API Conformance v5.x

This component depends on [TMF620](#) API. The component must support the following as a client of this API:

Resource	Operation	Attributes	Rule	BDD reference
ProductOffering	GET (by id)	href , id	M (No Condition)	< Link to BDD page for this API Resource dependency scenario >

ProductSpecification	GET (by id)	href, id	M(No Condition)	<Link to BDD page for this API Resource dependency scenario>
ProductOfferingPrice	GET (by id)	href, id	M(No Condition)	<Link to BDD page for this API Resource dependency scenario>

3. Canvas Conformance

3.1. Deployment Conformance

Canvas should be Kubernetes based and it is required to have the component deployment in a Kubernetes based environment. Cluster should be running on a supported Kubernetes version. Ensure that the Kubernetes manifests, deployment configurations, and custom resources are compatible with the targeted Kubernetes API version. Compatibility with 3 previous Kubernetes versions must also be considered for backward compatibility.

only trusted container images from reputable sources must be used.

3.2. Configuration Conformance

Helm chart MUST be used to deploy the ODA Component in a Kubernetes cluster and should contain all necessary resources. Configuration file MUST in YAML.

Namespace MUST exist for Canvas and Components.

Custom resource Definition (CRD) MUST exist for Components and API definitions.

Canvas operator and Canvas component versioning webhook MUST be running.

3.3. Security Conformance

The below table lists the Mandatory Exposed and Dependent API required for Security Conformance of [TMFC005](#)

3.3.1. Security Exposed API Conformance

Mandatory Rule	API	Version	Reference to CTK
AllOf	TMF669	4.x	https://www.tmforum.org/oda/open-apis/table

3.3.1.1. TMF669 API Conformance v4.x

The component's API must support all mandatory resources, operations, attributes, and notifications as mentioned in [TMF669B \(TMF669v4.x Conformance Profile\)](#)

1. ODA Specific [TMF669](#) API Conformance v4.x
None

3.3.2. Security Dependent API Conformance

The below table lists the Mandatory Dependent API required for Security Conformance of [TMFC005](#)

Mandatory Rule	API	Version
OneOf		
AllOf		

3.4. Management Conformance

Below table lists the Mandatory Exposed and Dependent API required for Management Conformance of [TMFC005](#)

3.4.1. Management Exposed API Conformance

Mandatory Rule	API	Version	Reference to CTK
AllOf	TMF702	4.x	https://www.tmforum.org/oda/open-apis/table

3.4.1.1. [TMF702](#) API Conformance [v4.x](#)

The component's API must support all mandatory resources, operations, attributes, and notifications as mentioned in [TMF702B \(TMF702v4.x Conformance Profile\)](#)

2. ODA Specific [TMF702](#) API Conformance [v4.x](#)

None

1. Management Dependent API Conformance

None
