Copyright © TM Forum 2025. All Rights Reserved.

This document and translations of it may be copied and furnished to others, and derivative works that comment on or otherwise explain it or assist in its implementation may be prepared, copied, published, and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and this section are included on all such copies and derivative works. However, this document itself may not be modified in any way, including by removing the copyright notice or references to TM FORUM, except as needed for the purpose of developing any document or deliverable produced by a TM FORUM Collaboration Project Team (in which case the rules applicable to copyrights, as set forth in the [TM FORUM IPR Policy](#) must be followed) or as required to translate it into languages other than English.

The limited permissions granted above are perpetual and will not be revoked by TM FORUM or its successors or assigns.

This document and the information contained herein is provided on an "AS IS" basis and TM FORUM DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

TM FORUM invites any TM FORUM Member or any other party that believes it has patent claims that would necessarily be infringed by implementations of this TM Forum Standards Final Deliverable, to notify the TM FORUM Team Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this deliverable.

The TM FORUM invites any party to contact the TM FORUM Team Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this TM FORUM Standards Final Deliverable by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this TM FORUM Standards Final Deliverable. TM FORUM may include such claims on its website but disclaims any obligation to do so.

TM FORUM takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this TM FORUM Standards Final Deliverable or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on TM FORUM's procedures with respect to rights in any document or deliverable produced by a TM FORUM Collaboration Project Team can be found on the TM FORUM website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this TM FORUM Standards Final Deliverable, can be obtained from the TM FORUM Team Administrator. TM FORUM makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.

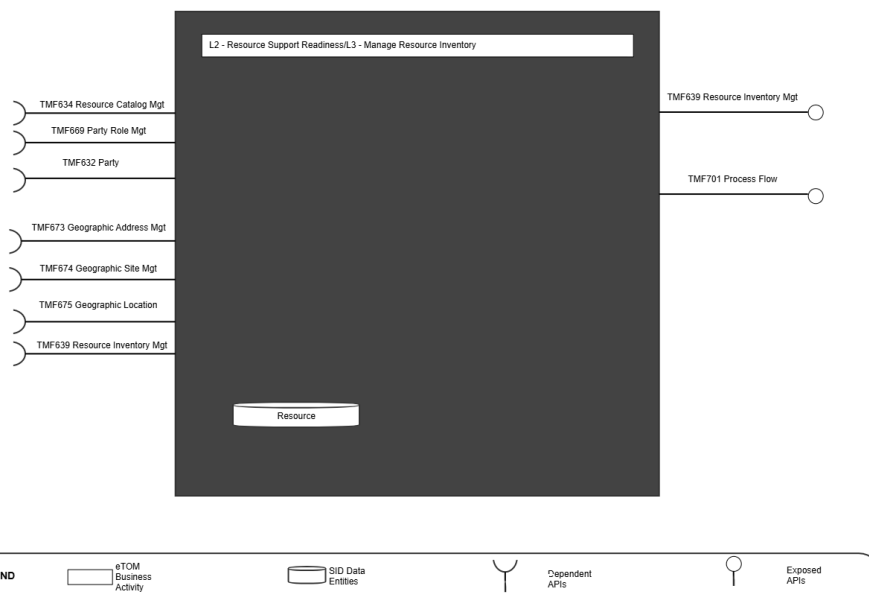

Direct inquiries to the TM Forum office:

Maturity Level: General availability (GA)	Team Approved Date: 10-Dec-2024
Release Status: Production	Approval Status: TM Forum Approved
Version: 2.1.0	IPR Mode: RAND

1. Overview

Component Name	ID	Description	ODA Function Block
Resource Inventory	TMF C012	Resource Inventory component is responsible for accounting for resources (all inputs - including stock, parts, assets, production components etc.) that are owned and/or held for allocation and/or use by the organization. Resource Inventory component has functionality that includes inventory items creation, inventory organization, inventory search or filter, inventory monitoring and tracking, inventory control (organization, re-stock management etc.) and inventory auditing. The minimum check to be performed at inventory items creation or update is the global consistency with related Resource Catalog information.	Production

TMFC012 : Resource Inventory

2. eTOM Processes and SID Data Entities

2.1. eTOM business activities

eTOM business activities this ODA Component is responsible for:

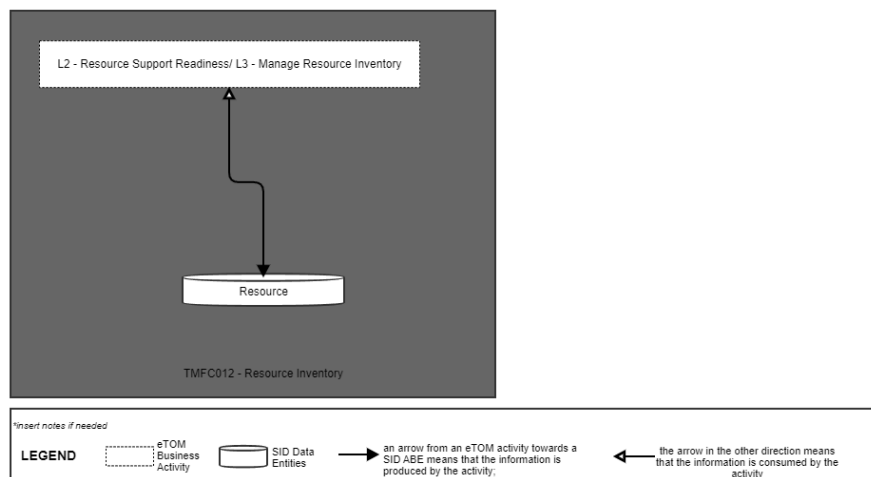

Identifier	Level	Business Activity Name	Description
1.5.4	L2	Resource Support Readiness	Manage resource infrastructure to ensure that appropriate application, computing and network resources are available and ready to support the Fulfillment, Assurance and Billing processes in instantiating and managing resource instances, and for monitoring and reporting on the capabilities and costs of the individual FAB processes.
1.5.4.5	L3	Manage Resource Inventory	Establish, manage and administer the enterprise's resource inventory, as embodied in the Resource Inventory Database, and monitor and report on the usage and access to the resource inventory, and the quality of the data maintained in it

2.2. SID ABEs

SID ABEs this ODA Component is responsible for:

SID ABE Level 1	SID ABE Level 2 (or set of BEs)
Resource ABE	Logical Resource ABE, Physical Resource ABE, Compound Resource ABE

2.3. eTOM L2 - SID ABEs links

2.4. Functional Framework Functions

Function ID	Function Name	Function Description	Aggregate Functions Level 1	Aggregate Functions Level 2
426	Physical Implementation Information Capturing	Physical Implementation Information Capturing provide levels of implementation details that tactical planning does not need to specify, such as duct routes and the frame appearances of device ports.	Resource Management	Resource Repository Management
442	Network Overviews Presentation	Network Overviews Presentation provides a more generalized view of the network than found in resource management.	Resource Management	Resource Repository Management
471	Resource Repository Updating	Resource Repository Updating function entails update of the resource Repository based on a provided collection of updates. The expectation is that the Repository is updated as requested, but no other side-effects are expected (e.g., creating an Sub Network Connection (SNC) in the network). This is a key point concerning this capability. The Repository update request can involve addition (new object), modification (change to an existing object) or deletion (removal of an object).	Resource Management	Resource Repository Management
453	Resource Configuration Change Logging	Resource Configuration Change Logging - Collects and Records the history of configuration changes	Resource Management	Resource Repository Management
454	Resource Configuration Management	Resource Configuration Management provides configuration database and management of the configurations of the individual resources	Resource Management	Resource Repository Management
456	Resource Topology Verification	Resource Topology Verification work with the Inventory Management functions to ensure that the topology reflected in its database is in sync with that in the Inventory Management Systems	Resource Management	Resource Repository Management

468	Resource Information Model Creation	Resource Information Model creation function allows Service Providers to create information base in the resource inventory of the managed resources along its attributes. This function uses the standardized information model (e.g. TM Forum Information Framework) for the resources to be managed. The specific details will depend on the particular resources (e.g., particular types of managed elements and equipments) and associated technologies.	Resource Management	Resource Repository Management
470	Resource Inventory Retrieval	This function allows for client operations support (service assurance and billing systems) to retrieve part or all of the resource inventory known to the target OSS. This feature may allow the following selection criteria: • retrieval of a specified set of one or more sub-trees • exclusion or inclusion of specified object types from the selected sub-tree • further filtering based on attribute matching • retrieval of only the object instances that have been modified after a provided date and time • For the selected objects, this feature may allow the client operations support (service assurance and billing systems) to specify what specific attributes and relationships shall be returned. This (the attributes and relationships to be returned) would be the same for all objects of the same type.	Resource Management	Resource Repository Management
471	Resource Inventory Updating	Resource Inventory Updating function entails update of the resource inventory based on a provided collection of updates. The expectation is that the inventory is updated as requested, but no other side effects are expected (e.g., creating a Sub Network Connection (SNC) in the network). This is a key point concerning this capability. The inventory update request can involve addition (new object), modification (change to an existing object) or deletion (removal of an object).	Resource Management	Resource Repository Management
472	Resource Inventory Update Notification	Resource Inventory Update Notification function entails the generation of inventory update notifications based on changes to the inventory: Notifications concerning object creation, object deletion and attribute value changes to other systems. • Single Entity Notifications – in this variation of the feature, each notification pertains to only one entity, e.g., an equipment instance • Multi-entity Notifications – in this variation of the feature, a single notification may report on inventory changes for multiple entities. • Notification Suppression – in this variation of the feature, each notification pertains to only one entity.	Resource Management	Resource Repository Management
562	Voucher Reporting	Voucher Reporting function for querying and reporting of voucher related data	Resource Management	Resource Repository Management
564	Voucher Life Cycle Management	Voucher Life Cycle Management including activation, locking, expiration and maintenance of purchased vouchers.	Resource Management	Resource Repository Management
738	Resource Data Inventory Synchronization	Resource Data Inventory Synchronization is the function that ensure OSS inventory data generated in each function is available to other functions as required.	Resource Management	Resource Repository Management
436	Number Aging	Manages the aging of numbers before they can be re-assigned.	Resource Management	Regulated Logical Resources Management
437	Number Assigning	Number Assigning manages the assignment of numbers for usage.	Resource Management	Regulated Logical Resources Management
439	Number Searching	Number Searching provides the means to search the number inventory.	Resource Management	Regulated Logical Resources Management
440	Number Tracking and Reporting	Provides functionality to track numbers and perform number reporting.	Resource Management	Regulated Logical Resources Management
743	Number Portability Orchestration	Number Portability Orchestration is a communication mechanism that ensures the Resource Number orders activation according to a criteria set, allowing in this way the correct execution of orders.	Resource Management	Regulated Logical Resources Management
744	Number Portability Risk & Effectiveness Management	Number Portability Risk & Effectiveness Management for determine of threats, risks and control of fulfillment, in order to comply with the execution of all Resource Number Portability orders.	Resource Management	Regulated Logical Resources Management
745	Number Portability Validation	Number Portability Validation can perform calculations that determine whether the information received is reliable, safe and contains the minimum information required during implementation, enabling with this the Resource Number Portability orders rejection for those who do not comply with the defined criteria.	Resource Management	Regulated Logical Resources Management
1062	Number Acquisition	Number Acquisition manages the capturing of numbers for the number inventory.	Resource Management	Regulated Logical Resources Management
1249	Number Porting	Number Porting implements the changes to transfer the management of a number from one Service Provider to another, and on request provides status on the implementation of the changes.	Resource Management	Regulated Logical Resources Management

438	Number Reservation	Provides the functionality to manage the reservation of numbers.	Resource Management	Regulated Logical Resources Management
435	Number Inventory Establishing	Number Inventory Establishing manages the establishment of a number inventory.	Resource Management	Regulated Logical Resources Management

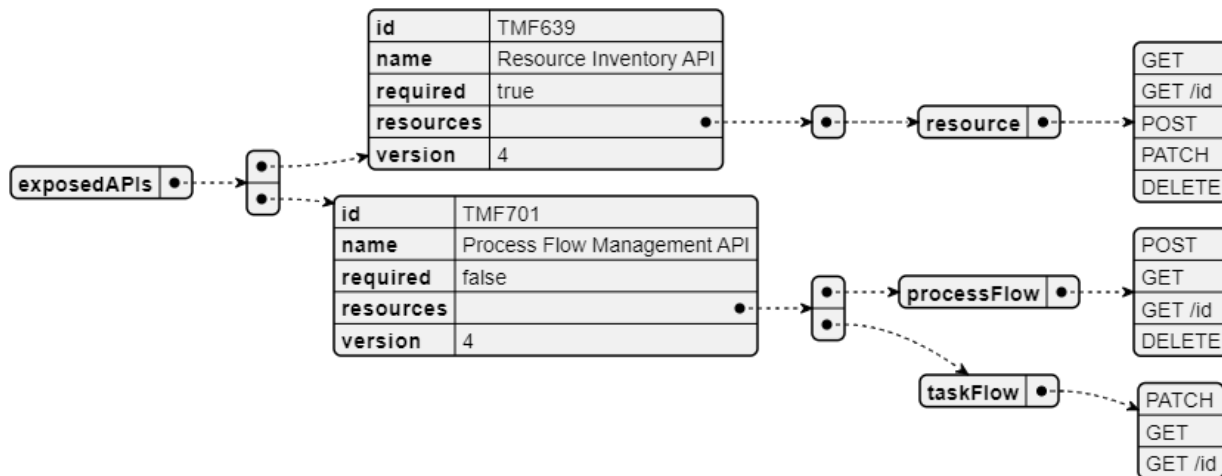

3. TM Forum Open APIs & Events

The following part covers the APIs and Events; This part is split in 3:

- List of **Exposed APIs** - This is the list of APIs available from this component.
- List of **Dependent APIs** - In order to satisfy the provided API, the component could require the usage of this set of required APIs.
- List of **Events (generated & consumed)** - The events which the component may generate are listed in this section along with a list of the events which it may consume. Since there is a possibility of multiple sources and receivers for each defined event.

3.1. Exposed APIs

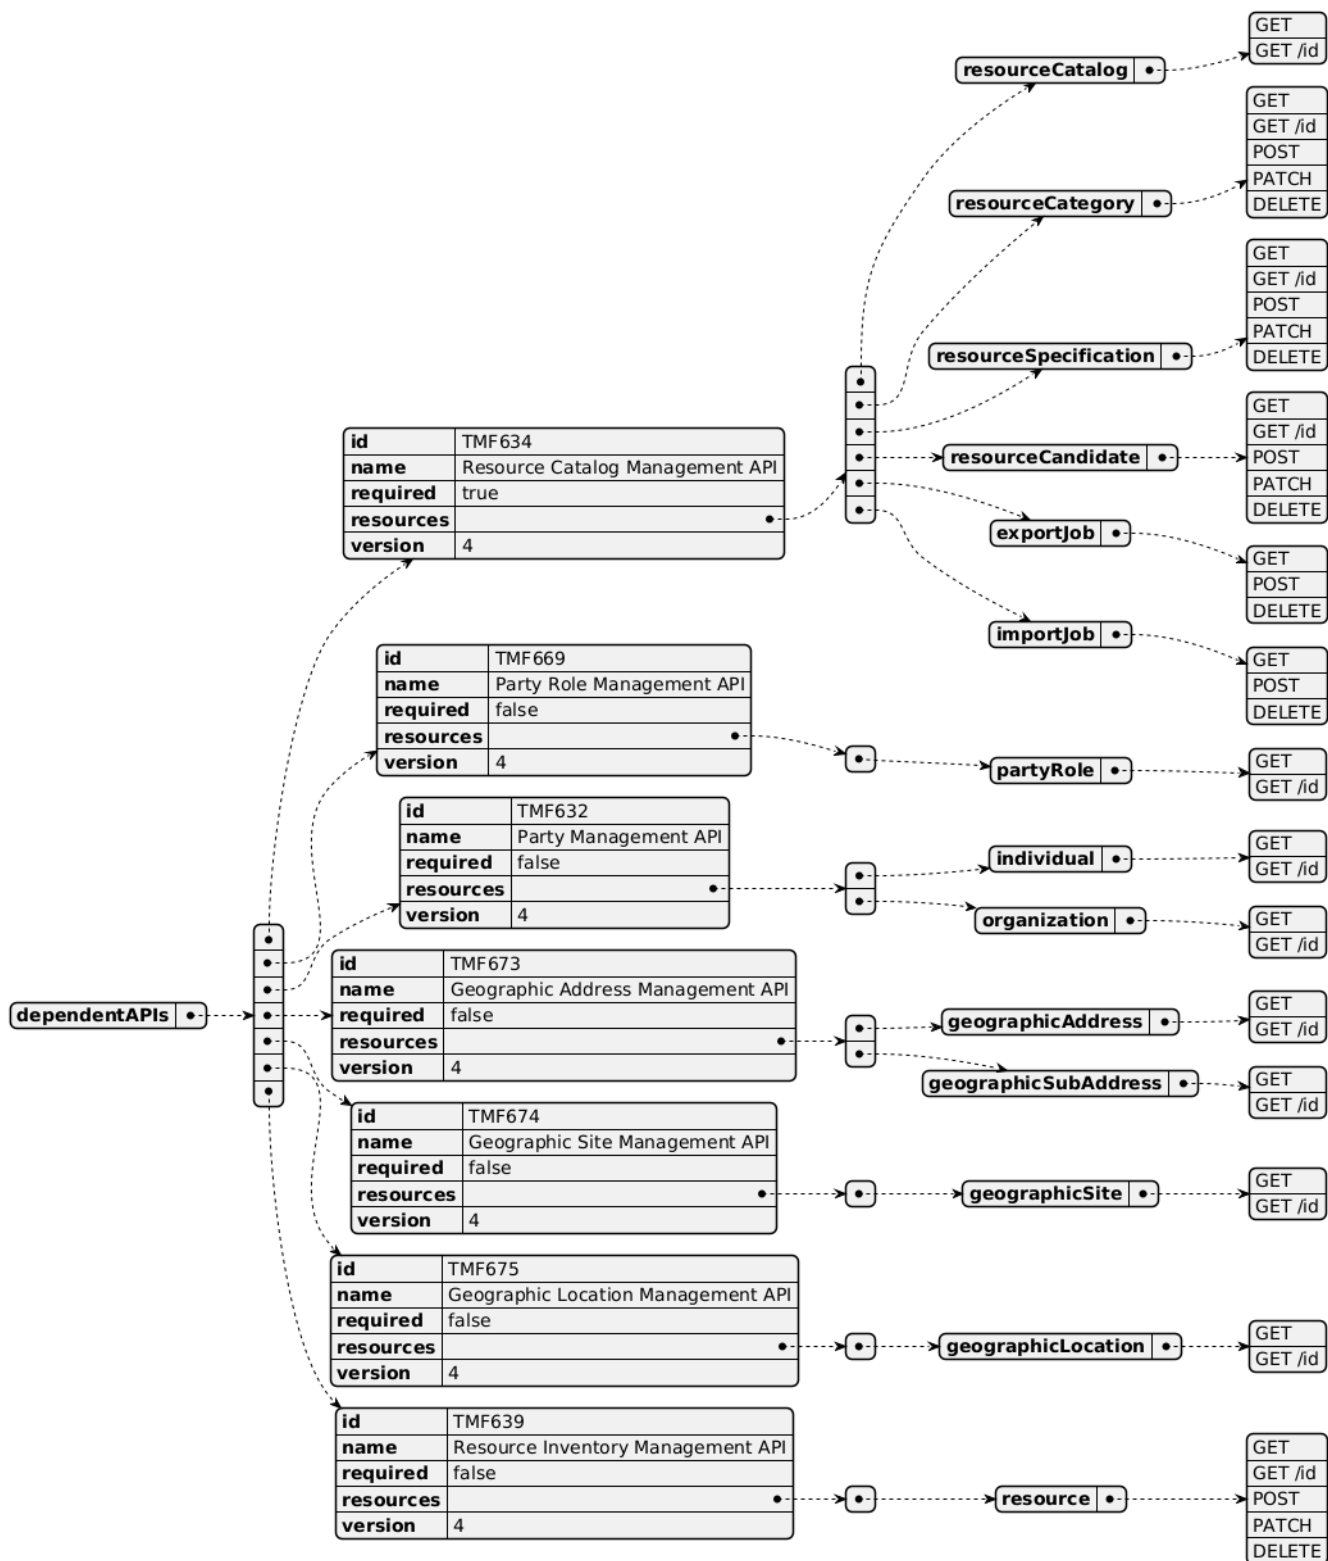

The following diagram illustrates API/Resource/Operation:

API ID	API Name	API Version	Mandatory / Optional	Resource	Operation
TMF639	TMF639 Resource Inventory	4	Mandatory	resource	GET GET /ID POST PATCH DELETE
TMF688	TMF688 Event	4	Optional	listener hub	POST POST DELETE
TMF701	TMF701 Process Flow	4	Optional	processFlow	GET GET /ID POST DELETE
				taskFlow	GET GET /ID PATCH

3.2. Dependant APIs

The following diagram illustrates API/Resource/Operation potentially used by the resource inventory component:

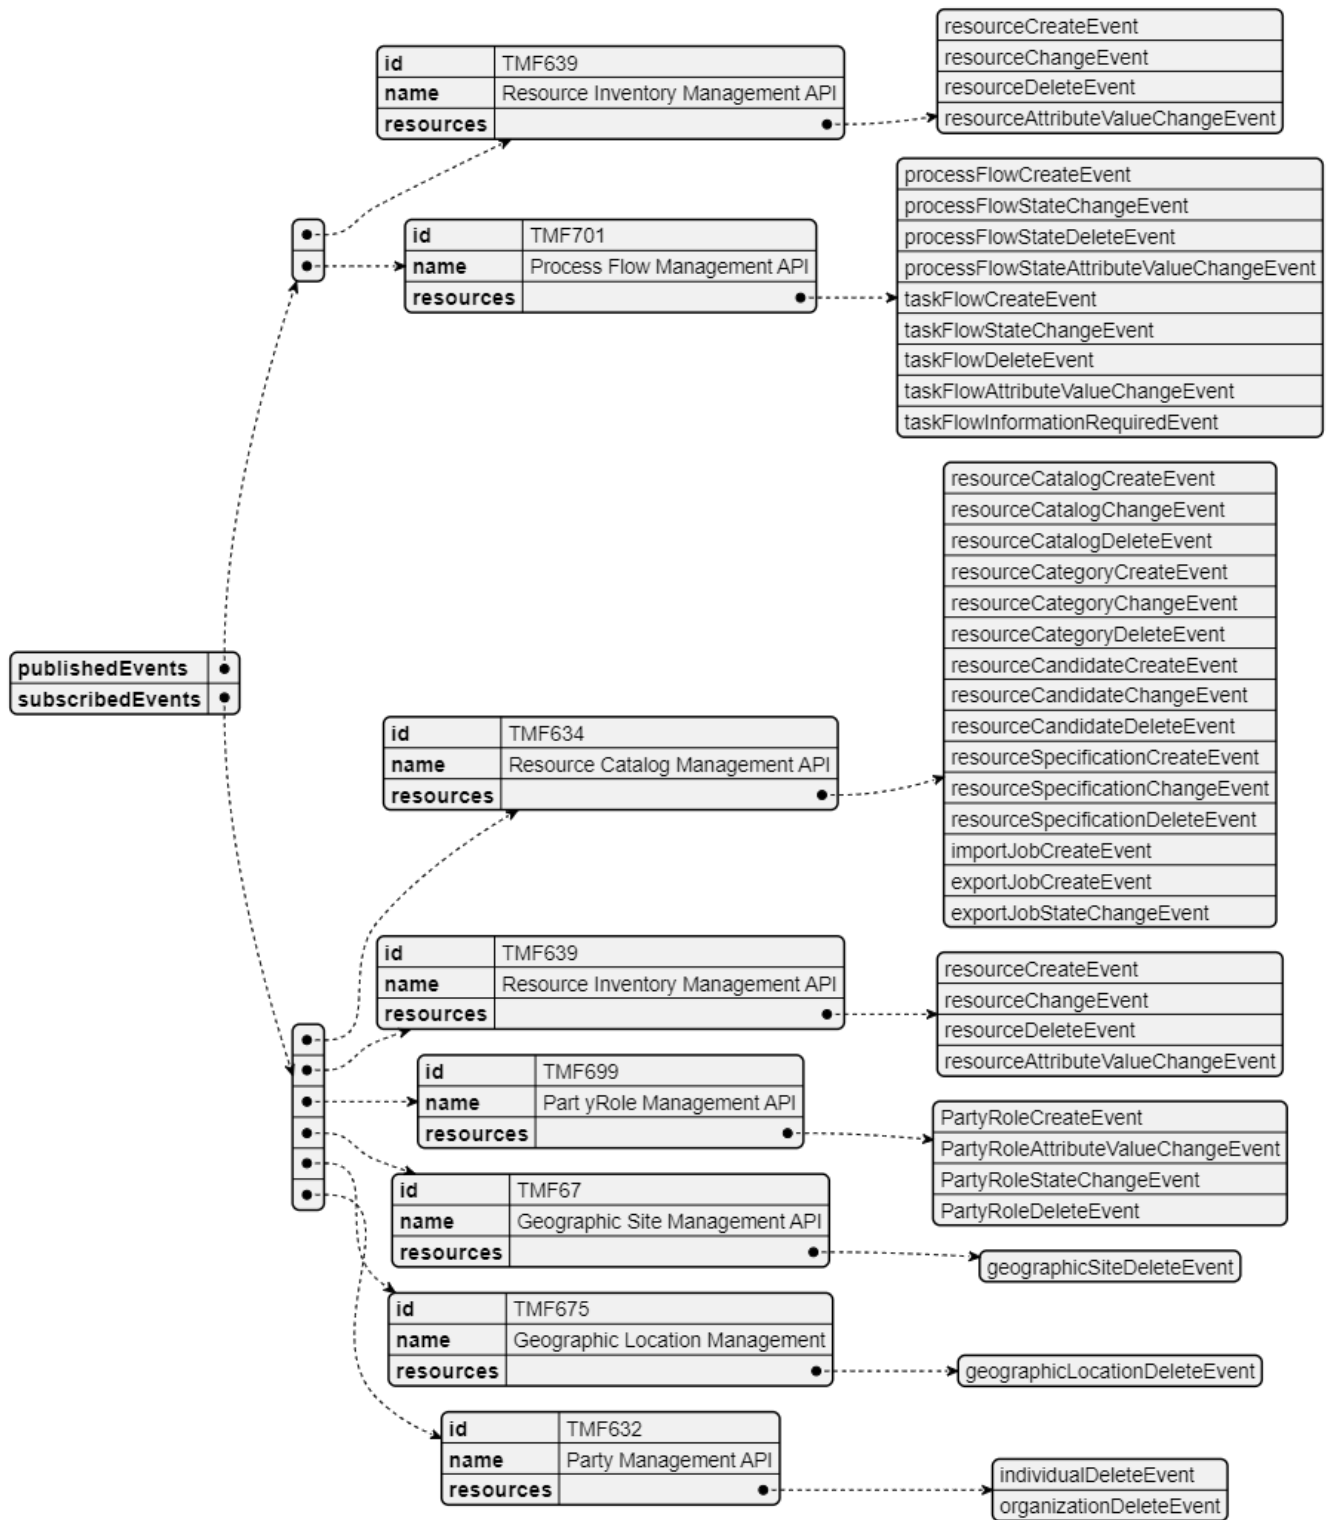

API ID	API Name	API Version	Mandatory / Optional	Resource	Operations	Rationales
TMF634	Resource Catalog Management	4.1	Mandatory	resourceSpecification	Get get /ID	consistency check.

TMF669	Party Role Management	4	Optional	partyRole	Get get /ID	
TMF632	Party Management	4	Optional	individual / organization	Get get /ID	
TMF673	Geographic Address Management	4	Optional	geographicAddress	Get get /ID	
				geographicSubAddress	Get get /ID	
TMF674	Geographic Site Management	4	Optional	geographicSite	Get get /ID	
TMF675	Geographic Location	4	Optional	geographicLocation	Get get /ID	
TMF672	User Roles And Permissions	4	Optional	permission	Get get /ID	
TMF639	Resource Inventory Management	4	Optional	resource	Get get /ID Post, Patch Delete	
TMF600	Event	4	Optional	event	Get, Post	

3.3. Events

The following diagram illustrates the Events which the component may publish and the Events that the component may subscribe to and then may receive. Both lists are derived from the APIs listed in the preceding sections.

4. Machine Readable Component Specification

Refer to the ODA Component Map on the TM Forum website for the machine-readable component specification files for this component.

5. References

5.1. TMF Standards related versions

Standard	Version(s)
SID	23.5
eTOM	23.5
Functional Framework	23.5

5.2. Jira References

5.2.1. Functional Framework

- [ISA-416](#) - Getting issue details... STATUS Harmonize as much as possible functions related to Product, Service and Resource Inventory
- [ISA-417](#) - Getting issue details... STATUS Review functions 465, 466 and 564 in Resource Inventory Mgt sub-domains as they are not related to such an inventory

5.2.2. API

<https://projects.tmfforum.org/jira/browse/AP-1401>

5.2.3. ODA Components

[TAC-342](#) - Getting issue details... STATUS Add a new Resource Topology Management component in the component inventory

5.2.4. Further resources

This component is involved in the following use cases described in [IG1228 How to use ODA - Using Open APIs to realize Use Cases](#):

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date Modified	Modified by:	Description of changes
1.0.0	31 May 2022	Kamal Maghsoudlou Sylvie Demarest	Initial release
1.0.1	25 Jul 2023	Ian Turkington	No content changed, simply a layout change to match template 3. Separated the YAML files to a managed repository.
1.0.1	14 Aug 2023	Amaia White	Final edits prior to publication
2.0.0	30 Apr 2024	Gaetano Biancardi	Updated Component Template Removed Resource Pool Management API from exposed list Aligned to Frameworks 23.5 Removed TMF688 Event Management (from exposed and dependant API) Removed TMF672 User Roles and Permissions from dependant API
2.0.0	12 Jul 2024	Amaia White	Final edits prior to publication
2.1.0	18 Nov 2024	Gaetano Biancardi	• API version, only major version to be specified • Dependant api, following APIs moved from mandatory to optional (correction of diagram typo): ◦ TMF673 ◦ TMF674

6.1.2. Release History

Release Status	Date Modified	Modified by:	Description of changes
Pre-production	31 May 2022	Goutham Babu	Initial release
Production	22-Jul-2022	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	14-Aug-2023	Amaia White	New release v1.0.1
Production	06-Oct-2023	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	12-Jul-2024	Amaia White	New release v2.0.0
Production	30-Aug-2024	Adrienne Walcott	Updated to reflect TM Forum Approved status

6.1.3. Acknowledgments

This document was prepared by the members of the TM Forum Component and Canvas project team:

Team Member (@mention)	Company	Role*
Kamal Maghsoudlou	Ericsson	Editor
Sylvie Demarest	Orange	Reviewer
Hugo Vaughan (TM Forum)	TM Forum	Additional Input
Ian Turkington	TM Forum	Additional Input
