

Component Conformance Profile

Component: ResourceCatalogManagement (TMFC010)

Overview

This document defines the **API conformance requirements** for the **Resource Catalog Management** component based **solely on the provided Component YAML**.

Only APIs marked as **required: true** are considered **mandatory** for conformance.

Mandatory Exposed APIs (Conformance Required)

The following **exposed APIs** are marked as **required** and **must be conformant**.

Where multiple versions of the same API are listed, conformance is defined as **either version** unless explicitly stated otherwise.

TMF634 – Resource Catalog Management API (Mandatory)

Conformance requirement:

The component **must conform to either or both** of the following API versions.

- **Version v5.0.0 (OpenAPI)**

- Swagger:

- [TMF634 Resource Catalog Management v5.0.0](https://tmf-open-api-table-documents.s3.eu-west-1.amazonaws.com/OpenApiTable/TMF634_Resource_Catalog/5.0.0/swagger/TMF634-Resource_Catalog_Management-v5.0.0.oas.yaml)

- **Version v4.1.0 (OpenAPI)**

- Swagger:

- [TMF634 Resource Catalog Management v4.1.0](https://tmf-open-api-table-documents.s3.eu-west-1.amazonaws.com/OpenApiTable/TMF634_Resource_Catalog/4.1.0/swagger/TMF634_Resource_Catalog_Management_API_v4.1.0_swagger.json)

Mandatory Dependent APIs (Conformance Required)

☒ **None**

All APIs listed under ``coreFunction.dependentAPIs`` are marked as ``required: false``.

Therefore, **no dependent APIs are mandatory for conformance** for this component.

Mandatory Security Function APIs

The Component under test **must either**:

- Integrate with the APIs listed under **Security Function**, **or**
- Operate with a **valid `canvasSystemRole`** as defined in the ``securityFunction`` section.

Because **TMF669** and **TMF672** are explicitly defined under ``securityFunction.exposedAPIs``, they are considered **mandatory** for conformance unless a valid ``canvasSystemRole`` is used.

TMF669 – Party Role Management API (Mandatory via Security Function)

Conformance requirement:

The component **must conform** to the following version:

- **Version v4.0.0 (OpenAPI)**
 - Swagger:
[TMF669 Party Role Management v4.0.0](https://tmf-open-api-table-documents.s3.eu-west-1.amazonaws.com/OpenApiTable/TMF669_Party_Role/4.0.0/swagger/TMF669_Party_Role_Management_API_v4.0.0_swagger.json)

TMF672 – User Role Permission Management API (Mandatory via Security Function)

Conformance requirement:

The component **must conform** to either or both of the following versions:

- **Version v4.0.0 (OpenAPI)**
 - Swagger:
[TMF672 User Role Permission Management v4.0.0](https://tmf-open-api-table-documents.s3.eu-west-1.amazonaws.com/OpenApiTable/TMF672_User_Role_Permission/4.0.0/swagger/TMF672_User_Role_Permission_Management_API_v4.0.0_swagger.json)
- **Version v5.1.0 (OpenAPI)**
 - Swagger:
[TMF672 User Role Permission Management v5.1.0](https://tmf-open-api-table-documents.s3.eu-west-1.amazonaws.com/OpenApiTable/TMF672_User_Role_Permission/5.1.0/swagger/TMF672-User_Role_Permission_Management_API-v5.1.0.oas.yaml)

Summary of Mandatory API Conformance

Category	API ID	Name	Versions
Exposed	TMF634	Resource Catalog Management	v5.0.0 or v4.1.0
Security	TMF669	Party Role Management	v4.0.0
Security	TMF672	User Role Permission Management	v4.0.0 or v5.1.0

☑ This completes the ****Component Conformance Profile**** derived exclusively from the supplied YAML.
