1. Overview

Component Name	ID	Description	ODA Function Block
Agreement Management	TMFC039	The Agreement Management component is responsible for creating, storing, editing, and tracking agreed arrangements with related terms and conditions over a lifecycle. The component manages offers, records acceptance, and associated considerations and intentions to establish agreements as legally binding. This component also provides workflows and templates that facilitate collaboration, communication and negotiation of agreements between parties, and administers the translation of agreements into contracts, when required. It provides secure storage, version control, compliance management, and renewal notifications for agreements.	Party Management

2. eTOM Processes, SID

Data Entities and Functional Framework Functions

2.1. eTOM business activities

eTOM business activities this component is responsible for are:

Identifier	Level	Business Activity Name	Description
1.6.5	L2	Party Agreement Management	Party Agreement Management manages all aspects of agreements with parties, including customers. Agreements include: • Purchasing agreements for products, services, and resources that meet the enterprise's needs • On-boarding agreements for a Party's offerings • Service Level Agreements with one or more other parties • Agreements to use a Party as a sales channel • Reusable template agreements that can be used to create any of the above.
1.7.14	L2	Enterprise Governance	Enterprise Governance business process manages activities that ensure accountability and control of the strategic direction of the organization.
1.7.14.5	L3	Manage Contract	Manage Contract business activity is in charge of managing agreements, from their creation through to their execution by chosen party, as well as the termination of contracts. Manage Contract business activity cover tasks that include managing contract creation, execution of contracts, analysis of contracts to maximize operational and financial performance and reducing financial risk.

2.2. SID ABEs

SID ABEs this component is responsible for are:

SID ABE Level 1	SID ABE L1 Definition	SID ABE Level 2 (or set of BEs)	SID ABE L2 Definition
Agreement ABE	One form of business interaction in which Parties (for example, Service Providers or Customers) engage is an agreement. An agreement is a contract or arrangement, either written or verbal and sometimes enforceable by law, such as a service level agreement or a customer price agreement. An agreement involves a number of other business entities, such as Products, Services, and/or Resources.	Agreement	A type of BusinessInteraction that represents a contract or arrangement, either written or verbal and sometimes enforceable by law.
		AgreementItem	The purpose for an Agreement expressed in terms of a Product, Service, Resource, and/or their respective specifications, inherited from BusinessInteractionItem.
		AgreementTermOrCondition	Aspects of the Agreement not formally specified elsewhere in the Agreement and that cannot be captured elsewhere in a formal notation or automatically monitored and require a more human level of management.
		AgreementAuthorization	BusinessParticipant responsible for approving an Agreement.
		AgreementApproval	A group of AgreementAuthorizations required from the BusinessParticipants involved in the Agreement.

2.3. Functional Framework Functions

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
1026	Partner Collaboration Constraints Collection	Partner Collaboration Constraints Collection function collect external and internal constraints that can impact a partner collaboration. The partner strategy definition is impacted by various factors, like partner's geographical location, governmental regulatory, product and services offered etc. The function also provides capability to consider security and financial risks, environmental and legal issues and existing agreements etc.	Purchasing Strategy Management	Purchasing Strategy Definition

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
1045	Partner Agreement Tracking	Partner Agreement Tracking function keeps the association of the partner product offerings with the agreements and tracks anomalies for single products or group of products of the partner.	Business Partner Management	Business Partner Agreement Management
1043	Partner Agreement Storage and Searching	Partner Agreement Storage and Searching function provide the ability to view Partner's existing agreements, search for partner agreements based on meta-data and to search text strings within agreements. The data can also be mined for partner strategy, negotiation, workflow and interaction purposes.	Business Partner Management	Business Partner Agreement Management
1044	Partner Agreement Implementation	Agreement Implementation function provides support for the implementation of the agreement's terms and conditions to be used by related organizations during operations.	Business Partner Management	Business Partner Agreement Management
1042	Partner Agreement Creation	Partner Agreement Creation function provides the functionality to automate the creation of an agreement based on templates or from scratch. The function allows to create and maintain predefined agreement options and templates with terms and conditions (e.g. pricing information, payment clauses, legal texts, etc.) for different purposes and services.	Business Partner Management	Business Partner Agreement Management

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
1180	Customer Framework Agreement Approval	Customer Framework Agreement Approval Function manages all approval of Party Roles involved in the Framework Agreement (Customer Roles as well as CSP roles).	Sales Management	Framework Agreement Management
1179	Customer Framework Agreement Definition	The Customer Framework Agreement Definition Function consists in defining the agreement that describes the commitments and company features valid for associated customer orders. It defines a subset of catalog offers and products which will be marketed to a customer with particular conditions (configurations of product, rates, discounts, SLA such as availability rate, restoration time guaranties, and associated penalties for the CSP).	Sales Management	Framework Agreement Management
363	Product Agreement Storage	Product Agreement Storage provides functionality necessary to store and make available the Product Agreements. This function allows: • to instantiate or update Product Agreement approved by the customer with their party involved, their configuration, their approvals and their status, • to update Product Agreements status, • to search and read Product Agreements.	Product Agreement Management	Product Agreement Storage

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
361	Product Agreement Implementation	Product Agreement Implementation function provides functionality pertaining to the implementation of the Product Agreement (a.k.a. contract) across fulfillment, assurance, and billing according to Product Agreement Specification. A Product Agreement represents the approval by the Customer and the Vendor of all term or conditions of a ProductOffering.	Product Management	Product Agreement Implementation
653	Contract Management	Contract Management, including establishment, modification, and termination.	Business Partner Management	Business Partner Agreement Management
1042	Partner Agreement Creation	Partner Agreement Creation function provides the functionality to automate the creation of an agreement based on templates or from scratch. The function allows to create and maintain predefined agreement options and templates with terms and conditions (e.g. pricing information, payment clauses, legal texts, etc.) for different purposes and services.	Business Partner Management	Business Partner Agreement Management
1043	Partner Agreement Storage and Searching	Partner Agreement Storage and Searching function provides the ability to view Partner's existing agreements,	Business Partner Management	Business Partner Agreement Management

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
		search for partner agreements based on meta-data and to search text strings within agreements. The data can also be mined for partner strategy, negotiation, workflow and interaction purposes.		
1044	Partner Agreement Implementation	Agreement Implementation function provides support for the implementation of the agreement's terms and conditions to be used by related organizations during operations.	Business Partner Management	Business Partner Agreement Management
1045	Partner Agreement Tracking	Partner Agreement Tracking function keeps the association of the partner product offerings with the agreements and tracks anomalies for single products or group of products of the partner.	Business Partner Management	Business Partner Agreement Management

3. TMF OPEN APIs & events

The following part covers the APIs and Events; This part is split in 3:

- List of **Exposed APIs** - This is the list of APIs available from this component.
- List of **Dependent APIs** - In order to satisfy the provided API, the component could require the usage of this set of required APIs.
- List of **Events (generated & consumed)** - The events which the component may generate is listed in this section along with a list of the events which it may consume. Since there is a possibility of multiple sources and receivers for each defined event.

3.1. Exposed APIs

Following diagram illustrates API/Resource/Operation:

API ID	API Name	Mandatory / Optional	API Version	Operations
TMF651	Agreement Management API	Mandatory	4	agreement: - GET - GET/id - POST - PATCH/id - DELETE/id agreementSpecification: - GET - GET/id - POST - PATCH/id - DELETE/id
TMF669	Process Flow Management API	Optional	4	processFlow: - POST - GET - GET /id - DELETE taskFlow: - PATCH - GET - GET /id
TMF688	Event	Optional		n/a

NOTE: "Resources Model coverage" element has been added to the table

3.2. Dependent APIs

Following diagram illustrates API/Resource/Operation:

The APIs called by this component and provided by other components are:

API ID	API Name	Mandatory / Optional	API Version	Operation	Rationale
TMF632	Party Management API	Mandatory	4	individual: - GET - GET/id organization: - GET - GET/id	From TMF651_Agreement resource schema, where Agreement vs RelatedParty relationship is listed as 1,..*
TMF672	User Roles & Permissions	Mandatory	4	get	
TMF669	Party Role Management	Optional	4	partyRole: - GET - GET/id	n/a

API ID	API Name	Mandatory / Optional	API Version	Operation	Rationale
	API		5	partyRole: - GET - GET/id	
TMF620	Product Catalog Management API	Optional	4	productOffering: - GET - GET/id productOfferingPrice: - GET - GET/id	n/a
			5	productOffering: - GET - GET/id productOfferingPrice: - GET - GET/id	
TMF637	Product Inventory API	Optional	4	product: - GET - GET/id	n/a
			5	product: - GET - GET/id	
TMF667	Document Management API	Optional	4	document: - GET - GET/id	n/a
TMF701	Process Flow Management API	Optional	4	processFlow: - POST - GET - GET /id - DELETE taskFlow: - PATCH - GET - GET /id	n/a
TMF688	Event	Optional		get	

3.3. Events

The diagram illustrates the Events which the component may publish and the Events that the component may subscribe to and then may receive. Both lists are derived from the APIs listed in the preceding sections:

4. Machine Readable Component Specification

Refer to the ODA Component Directory for the machine-readable component specification file for this component.

5.1. TMF Standards related versions

Standard	Version(s)
SID	23.5
eTOM	23.5
Functional Framework	23.5

5.2. Jira References

eTOM

[\[ISA-756\] Review eTOM business activities related to agreement and or contract management - TM Forum JIRA](#)

In eTOM 22.5 we have:

- In Business Partner Domain: **L2 – Party Agreement Management (1.6.5)**.
- Its definition includes “all aspects of agreements with parties, including customers” which seems to be an anomaly: we should have distinct business activities related to customer and partners
- Its definition also includes “Purchasing agreements for products, services and resources that meet the enterprise’s needs”: whatever the enterprise will need for its internal activities, it will always order products and product offerings to its suppliers or partners (nether services nor resources).
- And “Applicable sub-processes are also used by other processes, such as Product Offering Agreement Management and Party Privacy Agreement Management.”: Product Offering Agreement Management
- In Customer Domain: nothing related to agreement and/or contract management (except for Privacy)
- In Product Domain: **L4 – Product Offering Agreement Management (1.2.7.2.4)** in L3 – Product Offering Development & Retirement (1.2.7.2) in L2 – Product Specification & Offering Development & Retirement (1.2.7),

with the following definition: “Develop a template agreement that defines the terms/conditions associated with a product offering.”

- In Market Sales Domain: L3 – Negotiate Sales/Contract (1.1.9.5) in L2 - Selling (1.1.9). Refer to ISA-711 ticket already created.
- In Enterprise domain: **L3 Manage Contract (1.7.14.5)** in L2 Enterprise Governance (1.7.14) which definition is very generic: “Manage Contract business activity is in charge of managing agreements, from their creation through to their execution by chosen party, as well as the termination of contracts.”

We need to have a clear set of business activities, defined at consistent levels and able to manage the different types of agreement and/or contract specification, and their instantiations in their related business context.

SID

[\[ISA-757\] Review SID Agreement ABE - TM Forum JIRA](#)

Describe all the types of agreements and contracts needed by a CSP, such as framework agreements, employees’ contracts, suppliers’ contracts, customer contracts with their specific links to other BEs such as catalogs.

Clarify the difference between agreement and contract terms.

Remove the positioning of the Agreement BE as specialization of Business Interaction and replaced it by clear and explicit relationships to Party and Party Roles.

Review the Service Level Agreement part of the ABE: SLA and SLA conditions can be better described as product specification and configuration, with their scope of application on other products, and their rating rules through the product offering subscribed.

Review the definition of BEs such as AgreementTermOrCondition or AgreementItem (not meaningful to link to Service or Resource levels).

5.3. Further resources

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date Modified	Modified by:	Description of changes
1.0.0	13-Jun-2023	Matteo Destino	Initial draft for Rights and Permissions component, with eTOM, SID and Open API mapping
1.0.0		Amaia White	Final edits prior to publication
1.0.1	25-Jul-2023	Ian Turkington	No content changed, simply a layout change to match template 3. Separated the YAML files to a managed repository.
1.0.1	14-Aug-2023	Amaia White	Final edits prior to publication
1.1.0	27-Aug-2024	Gaetano Biancardi	New Component template applied Exposed API: removed: TMF688 Event Management Dependant API: removed: TMF688 Event Management Functional Framework Function, following functions added: • Customer Framework Agreement Approval 1180 • Customer Framework Agreement Definition 1179 • Product Agreement Storage 363 • Product Agreement Implementation 361 • Contract Management 653 • Partner Agreement Creation 1042 • Partner Agreement Storage and Searching 1043 • Partner Agreement Implementation 1044 • Partner Agreement Tracking 1045
1.1.1	09-Sep-2025	Rosie Wilson	Updates to description per agreed YAML updated on 03 Jun 2025 Final administrative updates prior to publication
1.2.0	25-Jun-2026	Sannah Sibaya	Final edits prior to publication
